

Mespack Hydroforma 660 DS is a low footprint, high-speed, and the fastest changeover time water-soluble machine. It is capable to produce up to **1400 ppm for liquid** products and 2400 ppm for powder products. This equipment is the most efficient water soluble pod solution worldwide, in which you can produce more pods, in less time and waste.

Packaging formats

Main standard features

- Accurate pre-measured doses
- Autosplicer (Hydroforma 660)
- Computer backed
- End-user convenience
- Enhancement user safety feature
- Full servo version (hydroforma)
- Packaging shipping costs reduced due to centralization
- Patented gentle handling protects pouches
- Pouch detector system minimizes clean-ups
- Precision filling system for liquids or powders
- Purging trough speed changeovers
- Reduction of dust and vapor inhalation due to chemical free contact

* Some of the items listed are optionals

Technical specifications

Machines	HYDROFORMA 660 DS
Max. Volume (cc)	50
Max. Output (p.p.m.)	2400
Max. Format (mm)	152.4 x 152.6
Min. Format (mm)	12.7 x 6.35

The final speed will depend on product and film characteristics, it may change according to projects.
