

ADVANTAGES

- Easy filter-replacement maintenance requirements
- Improves engine efficiency & availability with a wide selection of filters
- Two-stage static filter system with high efficiency and lowest pressure drop
- It offers good flexibility to adapt your filter solution to changing environmental/operational conditions

Application	Recommended in low to average dust environments
Installation Options	Weather hoods (rain or snow) A droplet separator stage for mist & moisture protection A pre-filter stage, typically a bag filter A final filter stage; a compact hydrophobic filter from F9-H13 efficiency Other features can be added depending on the environment, such as an anti-icing/air inlet heating system, air inlet cooling system, trash or insect screens Can be supplied in painted carbon steel, stainless steel or marine grade aluminum
Comment	Contact your nearest Camfil office for sizing, staging and configurations choice. Ask us for a Life Cycle Cost evaluation based on your site conditions and/or request an on-site evaluation of your site conditions to validate the required level of protection.

Static filter system offers maintenance free operations with a lot of flexibility to adapt to changing environmental conditions or operating regimes. Multiple stages increase availability, facilitate water handling at low operating pressure drops and reduce the risk of by-pass
